The difference
between art and craft
is between
purposeful creation
and the creative
process. A painting
you paint from life
may be considered
art if it's a
commissioned or self-

commissioned piece
or a work of art if it's
a gift for a friend. A
postage stamp
design is a craft. And
a watercolor painting
is a craft; a
commissioned
painting or a gift for
a friend. Crafts are
there to create, or in
some cases, to
create the illusion of

creation for the viewer. Crafts create the art of the process of creation. In contrast, the purpose of art is usually to communicate a message. Many years ago, photographers using film had to develop their own film. Today, you can

purchase premade film. With the advent of digital cameras, photographers now create their own negatives. The process of using the camera to create your own negatives has made the digital camera a reality. The people in this book are familiar with the

photo-editing programs that allow you to manipulate the digital file to produce a finished picture. This book is a platform for learning the tools of digital photo editing and manipulation. Illustrated in this book is the entire digital workflow so

you can capture your images and start editing them immediately. You'll see how to take a RAW image file and turn it into a finished work of art. Just as importantly, you'll see how to transform your RAW file into a finished product, whether for your

portfolios or for
prints and slides. The
biggest mistake
amateur
photographers make
is that they think the
more they shoot, the
better their pictures
will be. In many
cases, the more
images you shoot,
the worse your
results. The goal

here is to teach you
the tools that you
need to be
competent with your
digital camera and
how to utilize
Photoshop for the
purpose of creating
better images. You'll
be using the
camera's RAW
format right off the
bat, as will all the

major cameras. This gives you flexibility in how the images are processed. In some cases, you may want to turn the RAW file into something a little more manageable (for example, 16 x 20 or 8 x 10), and this is where you'll see some of the

processes illustrated for you. You'll see how to correct exposure, white balance, and color in many situations. You'll also learn how to fix certain problems — such as strong highlights, dark shadows, or overexposed highlights. The more

images you shoot,
the more opportunity
you have

The Magic Wand tool is used for selecting areas of an image that have the same color. This is the basic tool for almost any type of retouching task in Photoshop. The Magic Wand lets you select the area of the

image you'd like to alter. The Pen Tool lets you trace paths in images, which is useful for creating geometric or organic shapes. If you have an image of a logo, the Pen Tool is a great way to create a logo shape. Use the Pen Tool and create a path, then fill that

path with the color you prefer. The Rectangular Eraser is useful for erasing objects, such as photos of a building, which are a little too close to the edge of the image. The Object Selection Tool allows you to outline objects and delete unwanted parts, such

as logos and people from photos. The Watercolor Tool allows you to add artistic style to your images and to create beautiful works of art. Simply click and create amazing-looking watercolor strokes. The Eraser Tool lets you erase unwanted objects

from images. It works like the Stroke tool, but it has a different icon and color. The Eraser tool has a high-resolution brush that can be used for detailed work. The Gradient Tool allows you to create different, gradually changing colors. It's useful for adding

color and style to photos. The Edge Detection filter can be used to recognize edges within an image. The Edge Detection filter is great for detecting the edge of an object, such as a house. It can also be used to determine where an object

begins and ends. The Lens Correction tool is used to correct blurs and other defects in photos. The Eyedropper Tool allows you to copy the color of objects within images and paste them into another image. If you are copying a color from a building, this

is a great way to add color to the surrounding areas. The Sharpen tool is used for making all the edges in an image sharper. This tool can be used on photos, but it works best with logos and other images with sharp edges. The Smudge Tool is used

for making photos or images look smudged. Just make some strokes on an image and it will look smudged. If you want to create a grunge look, use the Smudge tool. The Threshold Tool lets you work with grayscale images. If you'd like to make the image

black and white,
select the Threshold
Tool

Unlike the insurer in Travelers, which contracted to provide coverage to the insured, the contract between Northwestern and appellants provided that appellants would purchase liability insurance for their own benefit. Appellants did not
